PK+ OneCare™ is an integrated platform for patients and caregivers that will provide a wide range of healthcare services to keep patients as independent as possible for as long as possible.

It includes vitals monitoring with optional hardware, disease specific education for nine clinical programs that address the most prevalent chronic conditions: Asthma, CAD, CHF, COPD, Depression, Diabetes, Hyperlipidemia, Hypertension, & Low Back Pain.

It also includes Care Plan Notifications, Alerts & Reminders. Learn more at [www.onecare.me](http://www.onecare.me)

### Why PK+ OneCare?

- OneCare brings together the world's best science, healthcare technology, behavioral training, clinical education, care task communication, patient care collaboration, care programs, nutritional programs designed to cure diseases, medication management, exercise programs designed for disease management, IOT devices and care coordination management programs designed to transform the home environment into a care center and pioneering the world's first Adherence Management as a Service Platform: AMaaS

### Problem: Poor Patient Adherence

#### Answer: Adherence Management

- If you don't change the environment, you won't change behavior, and if you don't change behavior, you won't change patient outcomes. Adherence Management requires changing the patient's environment, behavior, and outcomes.
- Family Centric Care: The family is the missing link of healthcare. A connected, trained, educated, equipped and certified patient and family care team is the answer to the patient adherence crisis.
- Also included are the Patient and Family Educational Platform, Nutritional Planning, Selfcare Task Management and Medication Management.
